SYSTEMS KLEENER POWDER

Powder Fount recirculation Systems Cleaner

Product Overview

Systems Kleener Powder cleans and removes ink, paper coating, mold, and calcium from the press recirculation system. This helps to ensure longer life of the fountain solution and to keep print quality consistent.

If a build-up of ink, paper coatings or calcium occurs, then the pH and conductivity of the working fountain solution will start to change, leading to dampening related problems.

Let Systems Kleener Powder do the work for you.

Product Benefits

- **No listed hazardous materials** and easy to use.
- Simple two-step process, no need to drain dirty fountain solution until cleaning is done
- Step One loosens debris and emulsifies ink residues
- Step Two shocks and re-acidifies the system, reducing the possibility of contamination of the fresh fount with cleaning solution
- Eliminates the need to dismantle in order to clean the entire system
- Easy to use, takes about 30-45 minutes to clean entire system

Recommendations for Use

Do not drain dirty fountain water. Add Systems Kleener Powder directly into dirty fountain water.

Using bottle supplied, Pre-dissolve Step One with water or slowly shake Step One powder directly into dirty fountain solution tank and let circulate for 30 minutes. Using bottle supplied, Pre-dissolve Step Two with water or slowly shake Step Two directly into dirty tank. Let circulate for 10 minutes to shock and neutralize Step One. Drain and flush system with clean water. Refill with fresh fountain solution. A set of quarts treats 8– 10 gallons and a set of gallons treats 32–40 gallons of dirty tank system water.
